EDUCATION

Ho Chi Minh City University of Technology and Education (HCMUTE) *2021 - 2026*

Major: Information Technology / Information Systems

- GPA: 7.46 / 10.00 (2.95 / 4.00)

SKILLS

- **Business Analysis:** Requirements elicitation and analysis (functional / non-functional), business process analysis, scope definition, use case specification
- **System Modeling & Documentation:** UML (use case, activity, class, sequence, collaboration, state diagrams), database design, system architecture description
- **Testing:** Test scenario design and functional testing
- **Data & Technical Literacy:** SQL (SQL Server, Oracle), MongoDB, REST API concepts, Python, JavaScript / TypeScript
- **Tools:** Figma (UI design), Git/GitHub
- **Soft Skills:** Analytical thinking, independent research, communication, time management

WORK EXPERIENCE

AI Virtual Fitting Room - TMF Fashion *02.2026 - 07.2026*

Graduation Thesis - Solo Business Analyst & Developer - Fashion e-commerce platform with AI-powered 3D virtual try-on

- Sole owner of the project from requirement analysis and system design to full implementation.
- Surveyed the online fashion market and existing virtual try-on tools to define the core problem: customers cannot try garments before buying, driving high return rates (30-40% reported for online fashion); set project scope and objectives.
- Gathered and documented functional requirements (product browsing, cart, checkout, order tracking, account and role management, 3D fitting room, AI size advisor, admin management and revenue reports) and non-functional requirements (security, performance, scalability, responsive UI).
- Modeled the system with UML: use case diagrams, detailed use case descriptions (actors, stakeholders, main and exception flows), sequence, collaboration and state diagrams; designed the database schema.
- Defined end-to-end business flows for customers (browse, try-on, cart, checkout, order tracking) and admins (product and category management, order processing, revenue reporting) with role-based access control.
- Designed a 3-service architecture (Next.js frontend, HonoJS/Node.js API, FastAPI AI engine) and implemented the full system, including the AI size advisor (GPT-4o-mini) that compares user measurements with product size charts.
- Designed and executed test scenarios for the fitting room (tops, bottoms, full outfits, male/female models, edge cases) and for the AI advisor; documented limitations and a roadmap (payment gateways, advanced inventory management, multi-language, analytics).

INFORMATION SYSTEMS ANALYSIS AND DESIGN *4/2025 - 5/2025*

Analysis and design of the information system for managing Moontea milk tea shop

- After surveying the milk tea shop, plan and specify the project. This includes describing the system and its functions.
- Draw activity diagrams, use case diagrams, and describe use cases for each function.
- Build class diagrams.
- Build sequence diagrams for each function.

ADDITIONAL INFORMATION

- English: Proficient in reading and writing.
